

STUMP JUMP HARROWS

5 SECTION MANUAL FOLDING FRAME

Proudly Australian Made

Delmade Stump Jump Harrows are available in four configurations, all utilising a prescribed number of harrow sections according to the required working width, from 2-9 sections. Stump Jump Harrows fulfil the needs of many secondary tillage operations, their floating 'stump jump' action being ideal for breaking down rough and uneven fields and for levelling and aerating pugged up pastures. They are also effective for final seed-bed preparation of ground prior to sowing.

Harrows – bars, lifts and trailing

DISCLAIMER: All specifications are central settings and exclude options. Due to our policy of continuous improvement, implements may differ from those illustrated. All specifications are therefore approximates and may be subject to variation. We reserve the right to change design and/or specifications without prior notice or obligation.

Bars

In their simplest format, up to 9 sections may be attached to a bar and dragged from a single central chain hooked to the tractor drawbar.

Rigid Lifts

3PL mounted frames carrying 3-5 sections. Lifts offer the advantage of easy trash removal from the tines, and greater mobility than bars.

Folding Lifts

Offer the same advantages as rigid lifts, but for wider configurations, (4-8 sections), and utilise two folding wings which are either manually or hydraulically operated to reduce overall width for road transport, narrow gateways, and for compact storage.

Trailing Harrows

9 section trailing folding units with a hydraulically operated lift mechanism, and the ability to fold compactly, making an easily transportable implement with a large working width.
