

# SMART HITCH

## Features:

The smart hitch is designed to maximize safety and productivity. The female hitch is welded onto implements like the counterweight and it can be quickly attached to the rear of the tractor without the need for the operator to dismount from the tractor. All it takes is to reverse the tractor and when the male and female hitch mates, it will click into position and lock itself to the implement. The implement can be easily detached with a single pull of the latch.

The following options are available:

- Hydraulic top link
- Include hoses to remote

Hydraulic top link

Male

Female

Category	Rating Approx. (kg)
Cat 1 Mini	1000
